PROJECTS / OPEN-SOURCE

SPEECH DENOISING THROUGH DEEP LEARNING | [Link](#) PYTHON, CNN

- In this project, we aim to tackle the problem of speech denoising using deep feature loss.
- Its goal is to remove noise and preserve useful information.
- We present an end-to-end deep learning approach to denoising speech signals by processing the raw waveform directly.
- Given an input audio containing speech corrupted by an additive background signal, the system aims to produce a processed signal that contains only the speech content.

EMPLOYEE MANAGEMENT SYSTEM | [Link](#) JAVA, HTML, CSS, JSP, Spring boot, MySQL, Apache Tomcat

- In our project, we develop a web page for storing employee details like employee ID, name, salary, mobile, address, and department in the database.
- Employee Management System is a tool that helps to monitor, access, and retrieve employee details by the organization.

STEMCELL BANKING | [Link](#) CSS3, JAVASCRIPT, PHP, HTML, Apache Tomcat 8.5, MySQL database

- The main objective is to design a portal for the public which enables the registration for storing stemcells in the stem cell bank.
- The system provides a list of available stemcell banks and the applicant must choose a stemcell bank of their wish.
- Then the applicant is asked to provide necessary details, complete their profiling, and then book a slot of appropriate date and time.
